

2nd International Conference on
OTOLARYNGOLOGY RESEARCH AND TREATMENT
May 16-17, 2024 | Bangkok, Thailand

TITLE: INHALED IBUPROFEN IN CHRONIC RESPIRATORY PATHOLOGIES

Name: Hector Carvallo

Affiliation: Former Professor of Internal Medicine, Buenos Aires University

Country: Argentina

Email ID: hymcarvallo@hotmail.com

Contact number: +541133768396

ABSTRACT (up to 300 words)

It is likely that the Professional who is not familiar with respiratory pathologies will find the apprehension of the concepts expressed in this kind of Tower of Babel of pathologies extremely confusing.

The inexorable limitation that these produce in the quality of life of the affected patients is indisputable, as well as the enormous economic cost that they originate in the productive and health systems. Nevertheless, a simplification -perhaps exaggerated- limits its management to prevention (impossible in genetically determined cases, and highly unlikely in the socio-economic conditions of those who suffer from them), and similar treatments (both in their poor results and in the magnitude of side effects), which -in many cases- will lead to the also unlikely lung transplant.

The therapeutic proposal with inhaled ibuprofen comes to provide a simple and economical alternative to add to this countless nosological entities

Presenter Name: Hector Carvallo

Mode of Presentation: Oral/Poster.
